

## Confidential Aviation Hazard Reporting System

---

The Confidential Aviation Hazard Reporting System provides a means for all to report [hazards](#) within our aviation industry, on the ground or in the air, whether real or perceived, before there is a loss of life, injury or damage.

### **The objectives of CAHRS**

- To prevent accidents and incidents by identifying hazards before there is a loss of life, injury or damage;
- To improve the safety awareness of the current aviation community;
- To enhance the basis for human factors research and recommendations for future procedures, operations, facilities and equipment.

### **Why is it important to report [hazards](#)?**

Reporting of hazards assist in identifying aviation hazards, risks and trends that might lead to potential incidents and accidents. In certain instances these are overlooked and only picked up when a loss of life and damage to property, have occurred.

### **Who should use CAHRS?**

- Anyone who wishes to confidentially submit a [hazard](#) report or system deficiency.
